PROFESSIONAL SUMMARY

Junior Developer with 1.3 years of experience in ELK Stack log analytics and full-stack web development. Proficient in the end-to-end log onboarding lifecycle — from log format analysis and parser development to index template creation, deployment via Apache Guacamole (PAM), and Daily ingestion monitoring in OpenSearch. Hands-on experience with Vector v0.43.0 pipelines and Logstash Dead Letter Queue (DLQ) resolution. Contributed to a CRM web application using React.js, TypeScript, and Node.js, delivering UI modules and RESTful APIs. Actively seeking opportunities to grow across log analytics and application development domains.

TECHNICAL SKILLS

Languages: JavaScript, Core Java, HTML5, CSS3

Frontend: React.js, TypeScript, Bootstrap

Backend: RESTful APIs

ELK Stack: Elasticsearch, Logstash (Grok, Dissect), Kibana, OpenSearch SIEM

Log Formats: Syslog, JSON, Custom Application Log Formats

Data Pipeline: Vector v0.43.0, Apache Guacamole (PAM) – Parser & Pipeline Deployment

Tools: Git, GitHub, Postman, VS Code, npm, Docker (Basic)

Operating Systems: Windows, Linux / Ubuntu (Intermediate)

WORK EXPERIENCE

Junior Developer – ELK Stack & Web Application | Secure IT Technologies Mar 2025 – Jun 2026

Duration: 1.3 years | Chennai, Tamil Nadu

ELK Stack & Log Analytics

- Analyzed incoming log sources to classify and document log formats (Syslog, JSON, and custom formats) as the entry point for every new log onboarding engagement.
- Prepared detailed field mapping sheets for each log source, defining field names, data types, and transformation rules to guide parser development and index template design.
- Developed log parsers using Logstash pipeline configurations (Grok, Dissect patterns) and Vector v0.43.0 transforms, converting raw unstructured logs into normalized, structured events.
- Created Elasticsearch/OpenSearch index templates with precise field mappings and index settings; uploaded and applied templates via OpenSearch Dev Tools console.
- Deployed parsers and pipeline configurations to production environments using Apache Guacamole (PAM), following standard deployment procedures.
- Monitored daily log ingestion in OpenSearch Discover, verifying field-level parsing accuracy, detecting broken or missing logs, and escalating issues for resolution.
- Performed daily index health monitoring across all active OpenSearch indices, rotating this process systematically to confirm logs arrived and were parsed correctly.
- Identified, diagnosed, and resolved Dead Letter Queue (DLQ) errors in Logstash, addressing root causes including mapping conflicts, malformed events, and pipeline misconfigurations.

Web Application Development – CRM Project

- Contributed to the development of an OpenSearch-backed CRM (Customer Relationship Management) application as part of a cross-functional development team.
- Built responsive UI screens using React.js and TypeScript — including customer forms, sentinel forms, and audit log views — ensuring consistent UX across all modules.
- Developed and integrated RESTful API routes using Node.js, implementing GET, POST, PUT, and DELETE endpoints to support full CRUD operations for CRM entities.
- Implemented client-side routing in React.js to wire each UI screen to its corresponding API endpoints, enabling seamless data flow between frontend and backend.

- Collaborated in requirement discussions and code reviews, ensuring UI components and APIs met functional and quality standards before release.

INTERNSHIP

Big Data Intern | Digipak Technology Solutions

Apr 2024 – May 2024

- Gained hands-on experience with Apache Hadoop ecosystem (HDFS, MapReduce) and Apache Hive for large-scale data storage and querying.
- Assisted in data ingestion workflows and batch processing tasks using Apache tools and frameworks.
- Developed understanding of distributed computing principles and real-time data pipeline concepts.

PROJECTS

CRM Application – OpenSearch Backend — *React.js, TypeScript, Node.js, OpenSearch, RESTful APIs*

- Developed a Customer Relationship Management web application with OpenSearch as the primary data store for customer records and relationship data.
- Delivered multiple UI modules — customer forms, sentinel forms, and audit log screens — using React.js and TypeScript with a component-based architecture.
- Implemented complete RESTful API routes (GET, POST, PUT, DELETE) using Node.js for all CRM entities and wired React.js client-side routes to each API endpoint.

EDUCATION

Bachelor of Engineering – Electronics and Communication Engineering (ECE)

CGPA: 8.28 / 10

PERI Institute of Technology, Chennai

2020 – 2024

Relevant Coursework: Digital Electronics & Logic Design, Microprocessors & Microcontrollers, Computer Networks, Data Structures & Algorithms, Embedded Systems, Signal & Systems, VLSI Design, Database Management Systems, Operating Systems, Object-Oriented Programming

CERTIFICATIONS

- Programming in Java – NPTEL
- Big Data – Digipak Technologies
- Web Design – FIIT Formacion Private Limited
